- Our focus is education from Pre-K through employment
- We use data for:
  - Impact Projects
    - Identifying teachers and systems whose students excel at the university
    - Accepting qualified students to the state universities before they apply
  - Visualizations of data to inform decisionmakers
    - Communities setting HS graduation and college going goals
    - Giving HSs feedback on how grads did in college – including grades by subject, degrees and certificates earned.
    - Giving middle schools feedback on how their students progress through high school and into college
    - Workforce trends and education outcomes & student preparedness for job opportunities
- Today we will focus on the automation data from the workforce visualization

# Our Projects Connect The Dots From Pre-K THROUGH Employment

# Workforce and Education Visualization

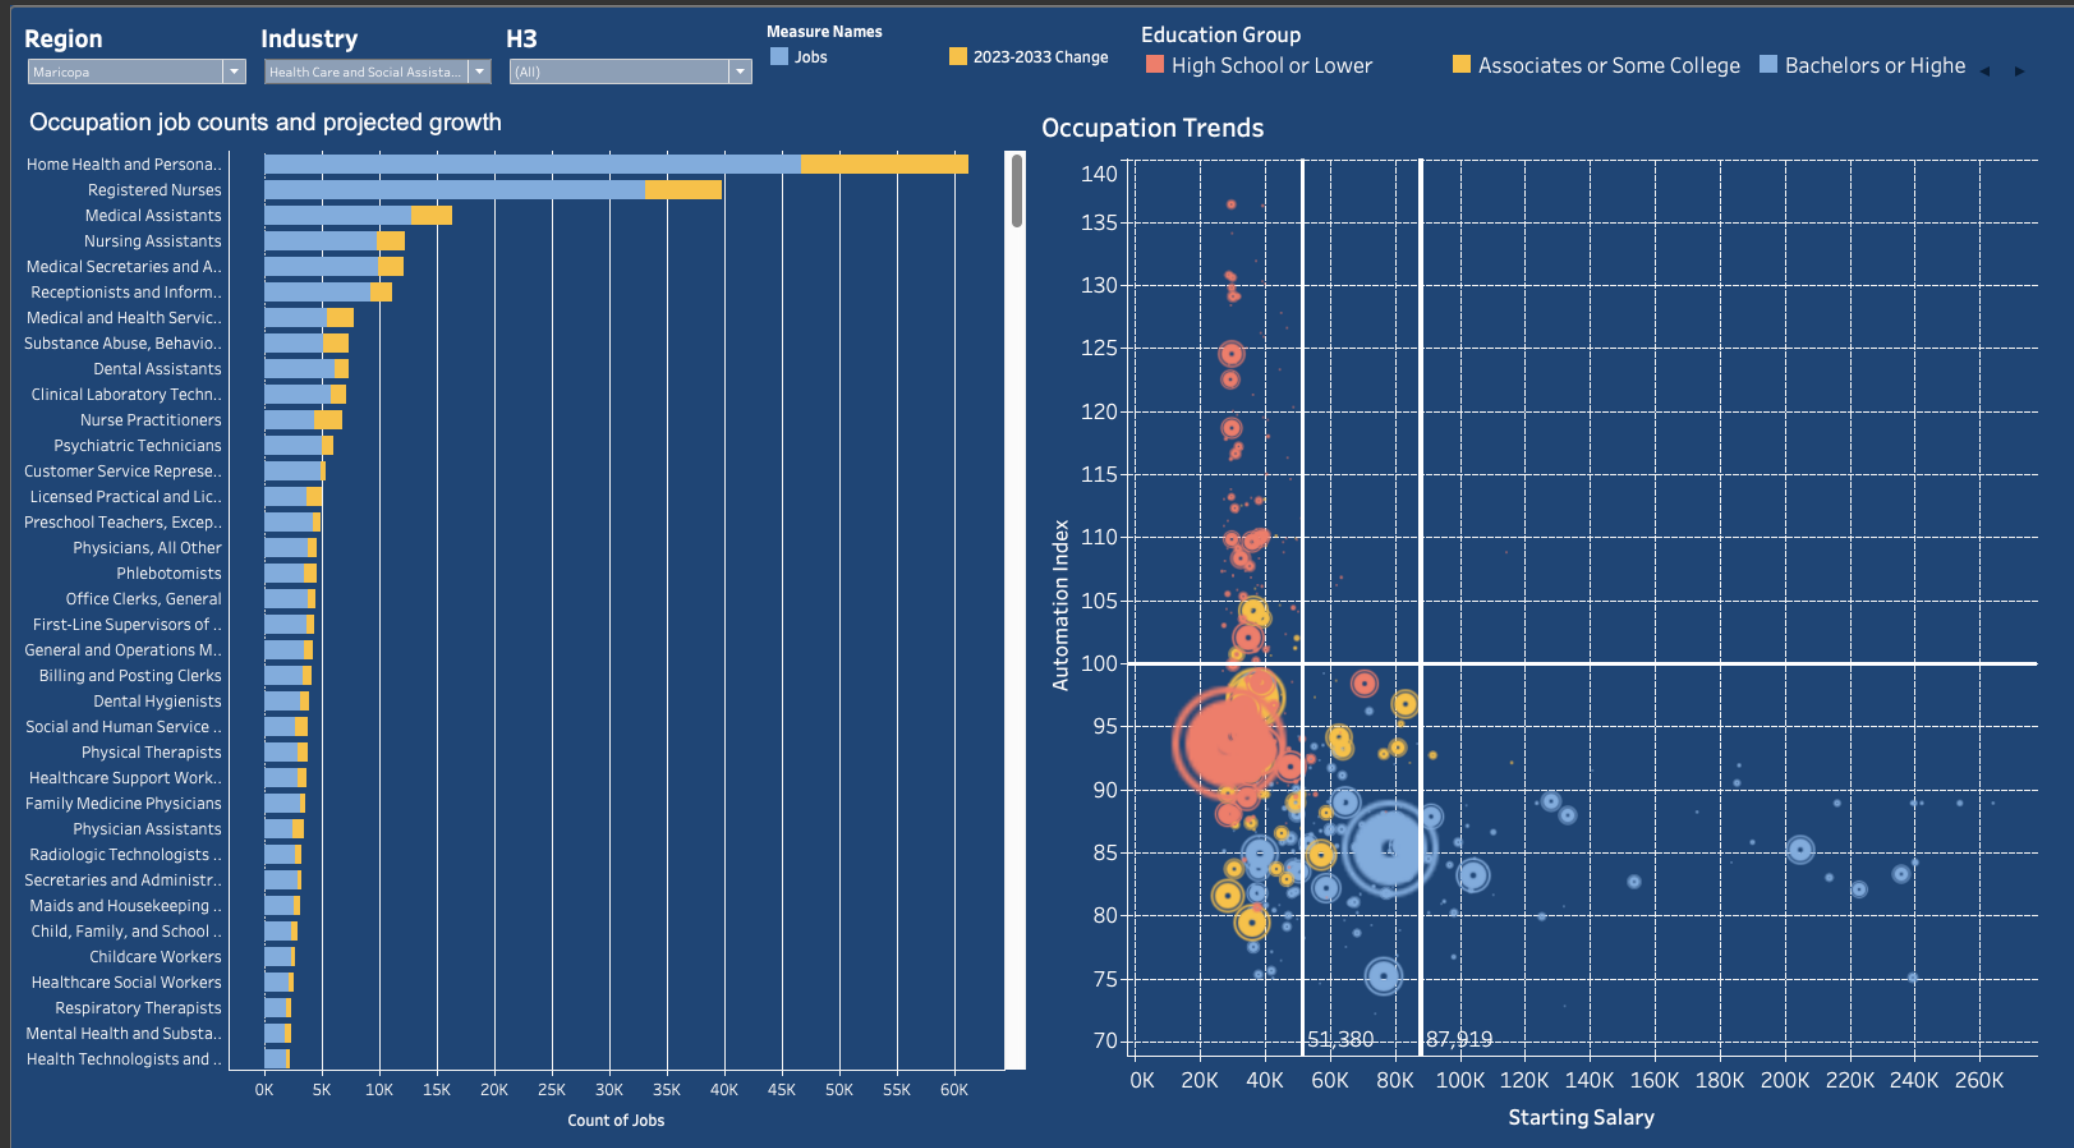

# How To Read This Graphic

# Finance Sector Employment & Projected Growth

# Health Care Employment & Projected Growth

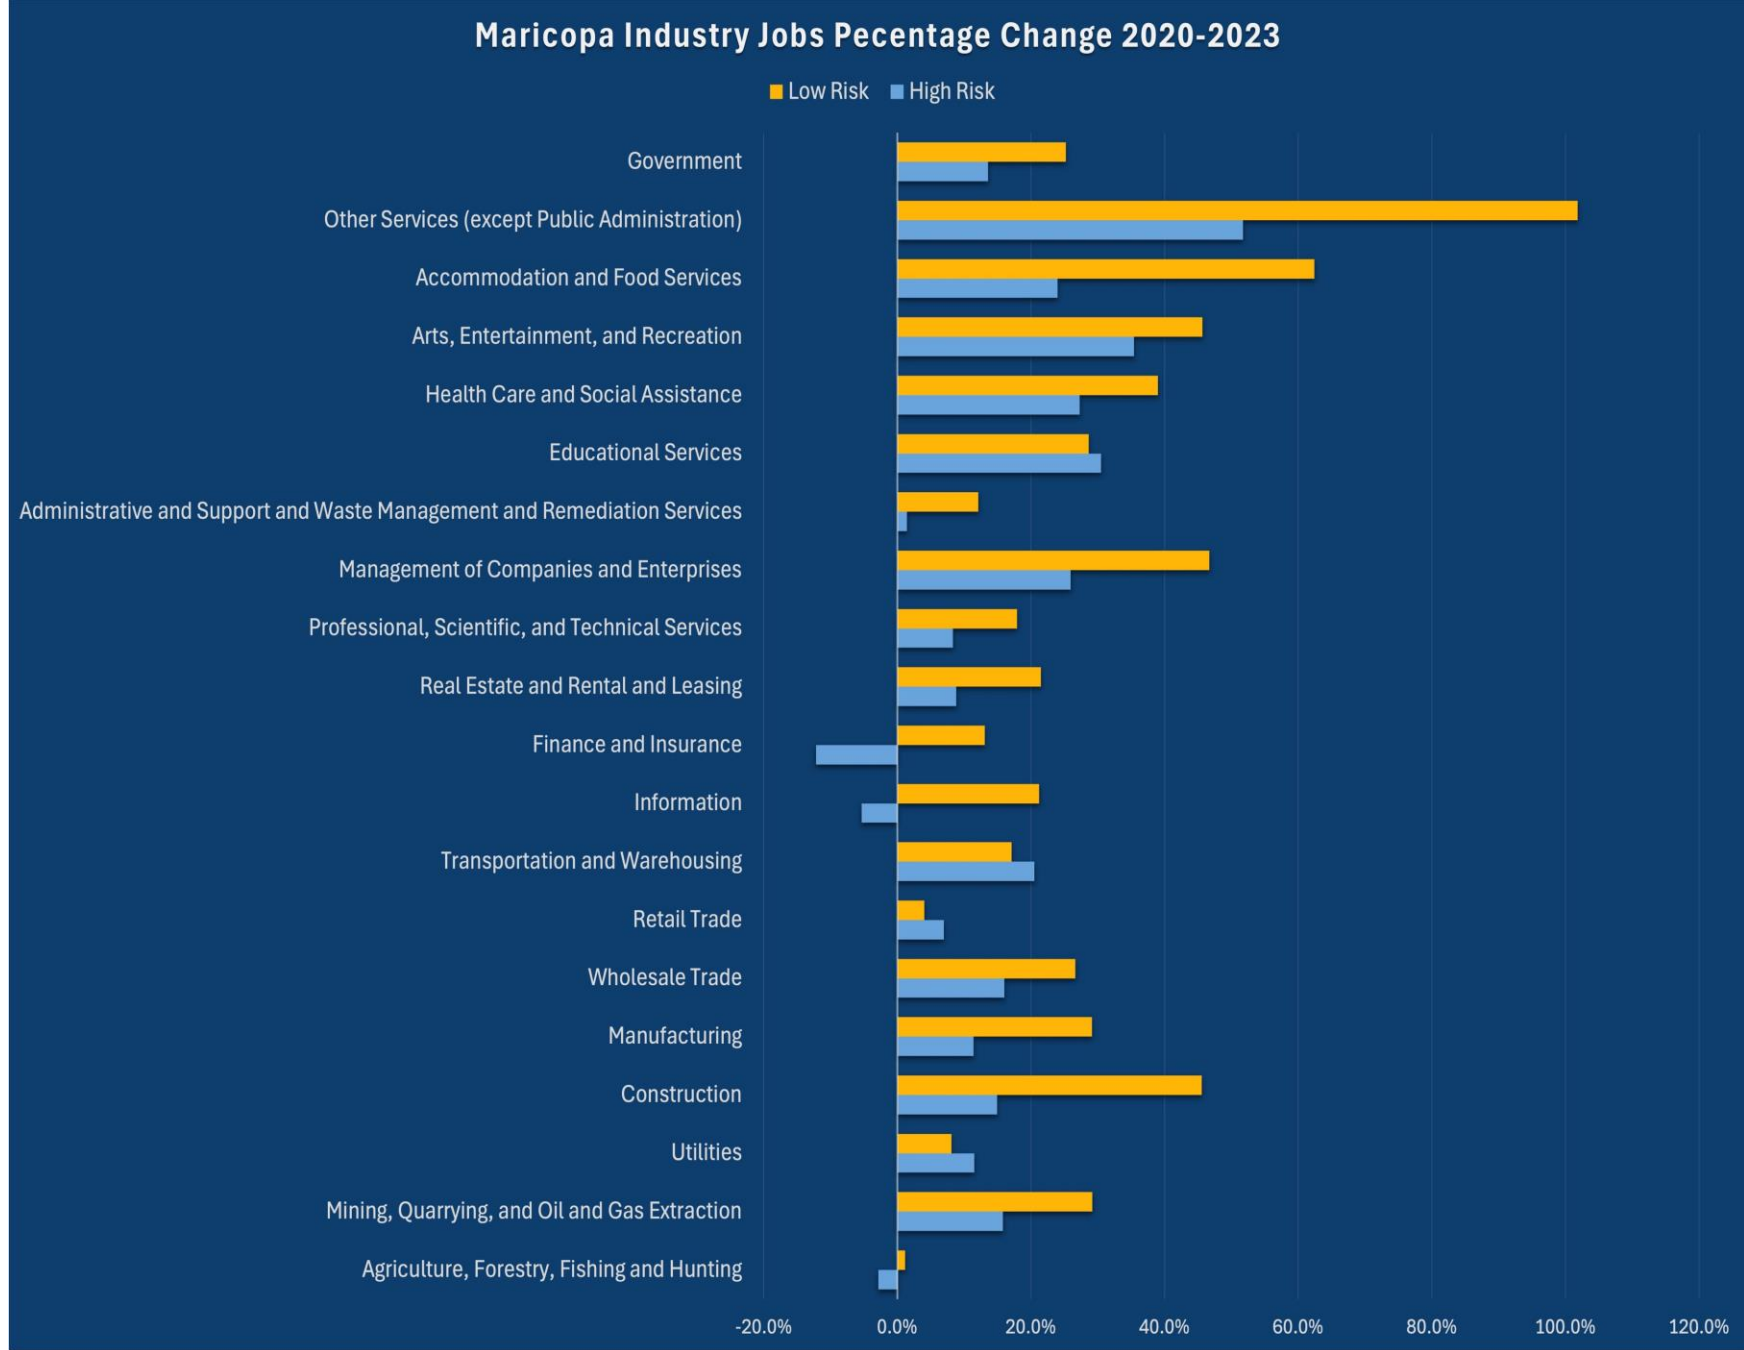

# Change In Automation Risk 2020-2023

Jobs that were at low risk of automation (gold bar) in 2020 are growing.

Jobs at high risk of automation (blue bar) are growing slower or even declining (in Finance, Information and Agriculture sectors).

This short term trend is projected to be a long term pattern, driven by technology, AI and population declines.
